IN THE CLAIMS

Please amend claims 1, 3, 4 and 6-14 as follows:

1. (CURRENTLY AMENDED) A self-service terminal comprising:

a plurality of media dispensing modules, each module being operatively associated with a pick mechanism for picking media from the module and transferring the picked media to a media dispense path, at least one module being associated with a vacuum pick mechanism, and at least one other module being associated with a friction pick mechanism.

2. (ORIGINAL) A self-service terminal of claim 1, wherein the modules are removable and interchangeable.

3. (CURRENTLY AMENDED) A self-service terminal of claim 1, wherein the at least one other module associated with the friction pick mechanism is a friction pick module and the friction pick mechanism is contained within the friction pick module.

4. (CURRENTLY AMENDED) A self-service terminal of claim 3, wherein the friction pick module comprises a plurality of friction pick units, each unit including a media storage location container and a friction pick mechanism.

5. (ORIGINAL) A self-service terminal of claim 4, wherein the friction pick units share a common media exit path within the module and leading to the media dispense path.

6. (CURRENTLY AMENDED) A self-service terminal comprising:

means defining a media dispense path;

a vacuum pick mechanism;

a friction pick mechanism; and

a plurality of media dispensing modules, each media dispensing module being operatively associated with a pick mechanism for picking media from the module and transferring picked media to the media dispense path, at least one media dispensing module

being associated with the vacuum pick mechanism and at least one other media ~~dispensing~~ module being associated with the friction pick mechanism.

7. (CURRENTLY AMENDED) A self-service terminal of claim 6, wherein the media ~~dispensing~~ modules are removable and interchangeable.

8. (CURRENTLY AMENDED) A self-service terminal of claim 6, wherein the friction pick mechanism is contained within the media ~~dispensing~~ module associated with the friction pick mechanism.

9. (CURRENTLY AMENDED) A self-service terminal of claim 8, wherein the media ~~dispensing~~ module associated with the friction pick mechanism comprises a plurality of friction pick units, each unit including a media ~~storage-location~~ <u>container</u> and a friction pick mechanism.

10. (CURRENTLY AMENDED) A self-service terminal of claim 9, wherein the friction pick units share a common media exit path which is within the media ~~dispensing~~ module and leads to the media dispense path.

11. (CURRENTLY AMENDED) A self-service terminal comprising:
means defining a media dispense path; and
a number of removable media ~~dispensing~~ modules, at least one media ~~dispensing~~ module including a plurality of media ~~storage-locations~~ <u>containers</u> and a friction pick mechanism operatively associated with each media ~~storage-location~~ <u>container</u> for picking media from the media ~~storage-location~~ <u>container</u> and transferring <u>the</u> picked media to the media dispense path.

12. (CURRENTLY AMENDED) A media ~~dispensing~~ module for use in a self-service terminal, the media ~~dispensing~~ module comprising:

means defining a media dispense path;

a plurality of media ~~storage locations~~ <u>containers</u>; and

a friction pick mechanism associated with each media ~~storage location~~ <u>container within the media module</u> for picking media from the media ~~storage location~~ <u>container</u> and transferring <u>the</u> picked media to the media dispense path for transporting <u>the picked</u> media from the media ~~dispensing~~ module.

13. (CURRENTLY AMENDED) A media dispensing module according to claim 12, further comprising means for enabling the media ~~dispensing~~ module to be removable and interchangeable in a self-service terminal.

14. (CURRENTLY AMENDED) A method of dispensing media from a self-service terminal, the method comprising the steps of:

selectively removing media from one of a plurality of media ~~storage location~~ <u>containers</u> disposed within a media ~~dispense~~ module, <u>wherein each of the media containers within the media module includes a friction pick mechanism for picking media from the media container and transferring the picked media to a media dispense path for removing the media from the media module</u>; and

presenting <u>the</u> removed media to a user.
